Prototypes of Shopping Cart Page

Low-Fidelity Mockup: I simplified the shopping cart page and included the name and quantity of the product that is in the cart. The user can also change the quantity of their items directly in the cart.

High-Fidelity Mockup: The shopping cart lists the items that have been added to the cart, with the subtotal, tax, and total below it. At the bottom of the page, there is a clear call to action button that leads the user to the checkout page. This makes it easy for the user to navigate to the next step of the process, and finish their purchase.
